

SYSTEM FOR PERFORMING INDUCED LIMB MOVEMENTS,
PARTICULARLY FOR REHABILITATING AND SPORTS PURPOSES

ABSTRACT

5

A system for performing induced limb movements, particularly for
rehabilitating, sports-related and similar purposes, characterized in that it
comprises a central processing unit (2), at least one peripheral unit (4) that
is adapted to be used by a patient in order to reproduce a rehabilitation path
10 displayed by the processing means, the peripheral unit being provided with
position sensors that are adapted to transmit position signals to the
processing unit in order to reconstruct the path traced by the patient on the
processing unit.
